

What is claimed is:

1. A method to virtually manipulate a digital content which comprises at least one object, comprising at least one behavior, the method at least comprising steps of:
5 providing a visible driving object in the digital content, the visible driving object having a plurality of statuses and being able to actively change a current status according to an manipulation demand of the digital content;
 designating the object according to a first status of the visible driving object;
 designating the behavior according to a second status of the visible driving object; and
10 manipulating virtually the behavior of the object.
2. The method of claim 1, wherein the digital content is a software program.
3. The method of claim 1, wherein the digital content is a teaching document.
4. The method of claim 1, wherein the behavior is selected at least one from a group consisting of an event, a method and a property.
- 15 5. The method of claim 1, wherein the plurality of statuses are selected at least one from a group consisting of a location of the visible driving object, an appearance of the visible driving object, and a speech sound of the visible driving object.
6. The method of claim 2, wherein the software program is a teaching software.
7. The method of claim 5, wherein the appearance of the visible driving object is an
20 action.
8. The method of claim 5, wherein the step of designating object is to designate the object according to the position of the visible driving object.
9. The method of claim 7, wherein the step of designating behavior is to designate

the behavior according to the action of the visible driving object.

10. The method of claim 1, wherein the first status is different to the second status.

11. The method of claim 1, wherein the first status is identical with the second status.

12. A website system virtually manipulating a web page, for virtually manipulating
5 the web page in a web browser of a client computer apparatus, the website system comprising:

a communication interface for setting up a communication link with the client computer apparatus;

10 a memory for at least saving the web page and a visible driving object, the web page being displayed on the web browser of the client computer apparatus via the communication link, the web page comprising at least an object, the object comprising at least a behavior, the visible driving object being downloaded to the web browser via the communication link, the visible driving object having a plurality of statuses and being able to
15 actively change a current status according to a manipulation demand of the web page;

a object-designating mechanism which is downloaded to the web browser via the communication link for designating the object according to a first status of the visible driving object;

20 a behavior-designating mechanism which is downloaded to the web browser via the communication link for designating the behavior according to a second status of the visible driving object; and

a virtual manipulation mechanism which is downloaded to the web browser via the communication link for virtually manipulating the behavior of the
25 object.

13. The website system of claim 12, wherein the behavior is selected at least one

from a group consisting of an event, a method and a property.

- 5 14. The website system of claim 12, wherein the plurality of statuses are selected at least one from a group consisting of a location of the visible driving object, an appearance of the visible driving object, and a speech sound of the visible driving object.
15. The website system of claim 14, wherein the appearance of the visible driving object is an action.
16. The website system of claim 14, wherein the object-designating mechanism designates the object according to the position of the visible driving object.
- 10 17. The website system of claim 15, wherein the behavior-designating mechanism designates the behavior according to the action of the visible driving object.
18. The website system of claim 12, wherein the first status is different to the second status.
- 15 19. The website system of claim 12, wherein the first status is identical with the second status.
